1501 Blue Spruce Dr  
Fort Collins  
8:30am-3:20pm

**Call (303) 689-4595 to make an appointment!**

## Mammograms are one of the most important health screenings that women can have.

Not because they prevent cancer, but because they save lives by detecting the disease as early as possible. In fact, finding breast cancer early reduces a woman's risk of dying from the disease by 25-30% if not more. With the convenience of Saint Joseph Hospital's mobile mammography unit, there is no reason to miss getting a potentially life-saving mammogram.

## Ease & Convenience

- Appointments in as little as 15 minutes.
- Some of the latest technologies, including 3D digital mammography and breast density measurement, that make getting a mammogram easier while producing more accurate diagnostic results.
- Little or no cost as most insurance plans will cover the entire cost of the screening.
- Fast results – typically back in 72 hours or less.
- Please make sure to bring your photo ID and insurance card to appointment.
- The USPSTF recommends that women who are 50 to 74 years old and are at average risk for breast cancer get a mammogram every two years. Women who are 40 to 49 years old should talk to their doctor or other health care professional about when to start and how often to get a mammogram.
