Q2

Respondent skipped this question

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

For 2000 setbacks, I would like to see no "off-ramps" allowed as they are allowed in COGCC rules, just a firm 2000 ft setback. Also setbacks for trails and trailheads.

I would like all communications from operators including flaring/venting, spills/releases, upset/hazardous conditions, etc. to be required in electronic form and posted on the Larimer County oil & gas website.

I would like to see the County set up continuous air emissions monitoring along the Fort Hills for VOCs, ozone, NOX etc. See system at Boulder Reservoir. <https://www.bouldair.com/boulder.htm> because we are one of 4 highest sites for ozone in the State. Also frequent emissions detection and rapid repair by operators. All air quality emissions mitigations from oil and gas should be retroactive to current oil and gas facilities.

The land use code should include reverse setback regulations to protect the families who will live in new developments.

Larimer County has 2 major rivers, wetlands, irrigation canals that need special protections and no oil and gas facilities in the flood plains.

Northern Larimer County also needs protections, i.e. Soapstone, ranches, etc. with protections for wildlife and the viewshed.

N/A.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

1. Setbacks should be 2,500' from buildings and waterways.
 2. County should require operators to pay for air quality monitoring stations near large well sites.
 3. County should require leaks to be repaired with 24 hours and impose stiff fines if leaks haven't been addressed in that time period.
 4. County should establish stiff fines for any spills affecting bodies of water.
 5. County should work with state as needed to collect sufficient funds from operators up front to plug well after they have been removed from service.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

3rd party not associated w/ O&G 24/7/365 air quality monitoring released to the public in real time. Much greater & more protective setbacks (2500' or more feet). Better spill & release regs w/ penalties for multiple spills & more transparency & easier accessed by the public to spill info. More protective leak detection & release regs like leaks fixed within 24 hours at most not 72 hours. Ongoing financial assurance w/ all current financial assurances filed with the COGCC; and Tax returns for the prior 5 years. Operator insurance w/ Minimum limits of \$1,000,000 Each Occurrence, \$2,000,000 General Aggregate and \$2,000,000 Products Completed Operations Aggregate. Automobile coverage, worker's compensation, employer's liability & umbrella/excess, professional E&O, pollution liability insurances & coverage required. Larimer County should be listed as the additional insured with operator's subs having the necessary insurance.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Green house gas emissions, especially methane, worker health and safety, any health risks or impacts on local human and ecological communities via air, water, soil contamination or habitat destruction. All of the above are important, and should all be considered and evaluated as part of a social costs of carbon analysis, in which the benefits of oil and gas are weighed against cumulative social costs [including from climate change], and O&G companies and their products are charged realistically to recognize and pay for all these social costs.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Reflect how we need to decrease green house gas emissions, especially methane, in line with best available current science, new Federal and State law, and reflect the social cost of carbon in pricing.

Q2 Respondent skipped this question

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Air Quality - Larimer County needs to set up a 24-hour air quality monitoring system. There is not much access to this information and with Fort Collins being the 19th worst city in the US for air quality, it is important residents are able to track the air for their health. Especially with a major respiratory pandemic. This is the very least the county can do.

Q1

From the list below please select and rank your top five topics that you believe need to be considered and updated as part of this project.

- | | |
|---|---|
| Setbacks | 1 |
| Air Quality | 2 |
| Leak Detection and Repair | 4 |
| Spills and Releases | 5 |
| Flow Lines, Transfer Lines, and Gathering Lines | 3 |
-

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

n/a

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I would like the regulations to clarify who will enforce these regulations and length of time to review applications. Will the County have staff to be able to "audit" facilities and ensure regulations are being followed?

Q2

Respondent skipped this question

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I would like to see 2,500 foot setbacks between all new oil and gas facilities, homes, schools and other high occupancy buildings. I would also like clear standards or methods of enforcement for any violations or consequences for noncompliance, such as fees or suspension of operations in the County regulations, and increased visits to sites to ensure compliance. I urge the COGCC to protect our natural areas and water resources from any new operations and heavily restrict current operations. The future is electric. We must begin to shut down oil and gas operations and provide clear routes for these companies to transition to renewables. We are severely behind climate action goals due to oil and gas.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

All should put health and environment first as indicated by the state adopted direction. The county should be leading the way in using the available data and information to protect citizens' health and safety, as well as the environment in which we all live. The regulations should be MORE stringent and purposeful than those at the state level, especially as we have a very populous county, compared to many others in the state, and many vital resources that must be protected. This is our opportunity to show who we are and how we truly act in favor of our citizens' health and safety, and how we protect the environment for generations to come.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

We need to have air quality monitors that check for VOCs and other pollutants. What is our baseline? What are we already breathing? We should have full disclosure of any and all chemicals being used in Larimer County for Oil and Gas. How many abandon wells do we have in Larimer County and are they all closed and sealed properly? Are all flow lines, transfer lines and gathering lines clearly marked now and will they be in the future. There are thousands of technical requirements that should be included in any oil and gas regs and the average citizen won't know what all these are but Larimer County has an obligation to insure the safety of its residents. I highly recommend a moratorium so that we can have sufficient time to understand everything. Why are we not just saying NO like other municipalities have to oil and gas. Clearly, this industry cannot be trusted. They pollute the air, our water and then they go bankrupt leaving the people who live here to pay for the damage they cause. We are suffering already with Oil and Gas from Weld County. Please say no!

Maintenance of Machinery	5
Other	1

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Frankly, the ranking of concerns is a distorted way of approaching this issue. All of the listed topics are inter-related, and trying to say any one is more important than another begs the question that this is a complex problem that requires a holistic and comprehensive approach.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Set backs: Out to 2500 feet from homes, high occupancy buildings and critical environmental and water resources
 Air Quality: Comprehensive monitoring on site paid for by O&G operators but monitored by objective third party. But there is also a need for comprehensive, 24/7 real time monitoring of regional air quality, because the effects don't just hover over a particular site.
 Water Quality and Water Bodies: The amount of water used in the processes may impact both surface water sources and and below ground aquifers. I have concerns as well about spills of waste products from O&G sites that can find their way into critically sensitive water resources.
 Maintenance of machinery: Ties into all issues. It is clear that many operators do not put the time, effort, and funds into making sure everything is tight, secure, and safe. Elementary tightening of joints with wrenches could eliminate a great deal of our surface and atmospheric emissions from these sites.
 Other: Again, there is no one issue that really transcends the others in importance. One thing frequently leads to another, and there has to be an awareness of all aspects at all times.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Property rights and reimbursing owners for lost income or reduction of property values due to over-reaching restrictions caused by regulations; No additional staff hired to enforce these regulations; at least 60% of seats on any created over-sight committee or commission must be currently affiliated with oil-gas industry producers; committee/commission can only look at specific issues directly related

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Every point should have a value or ROI assessment attached - how will any/every change affect property owners, neighboring properties, and the employment/economic health of Larimer county and region. Any influence from any organization/individual from inside/outside Larimer county that has contacted, lobbied on behalf/against, or contributed to influence decisions regarding these regulations must be disclosed fully and publicly before any final decision is made. Any discussion to change any part of these regs/rules must include actual, factual data which background data and scientific methods must be fully open to public inspection at no cost to residents at least 90 days before any committee/commission meeting at which said evidence will be used to make any changes. Counter information must also be made public, showing that the committee/commission looked at all sides of issues fairly and equally.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Ecological damage, particularly to plant biodiversity

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I can't read the regulations right now. I just hope they are updated in a way that limits oil and gas development so that communities are not disturbed by noise and quaking, so biodiversity is not threatened, light pollution is reduced, and generally that such development is limited to only what is absolutely necessary. We need to be phasing out such development projects and turning focus to renewable resources.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Local carbon taxes or offsets as part of permitting process or operations standards to mitigate the impact that O&G extraction places on our climate. Carbon directly impacts CO's natural and cultural resources, which are intended to be protected by these regulations (17.1.C.5). We saw the largest CO wildfires in Summer 2020, made worse by severe drought and heat associated with climate change threaten and destroy forests, homes, and historic locations in CO's foothills.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Add carbon taxes or offsets to the permitting process or operation standards for O&G sites. O&G is still a critical resource for today's society, but it is also a critical threat to tomorrow's society. We should update regulations to recognize and account for both issues. As extreme temperature, weather, and natural hazards become more frequent, we slowly lose the ability to share and pass on the CO that we love to our children.

Other	5

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Ending fossil fuel subsidies and reassigning them to green energy infrastructure

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I doubt there is much that can be done via regulations at this point although all of the ones that existed prior to TrumpPutin should be reinstated. We are beyond the point where minor policy changes can save us. We must end fossil fuel subsidies and with that 25 billion wasted dollars a year into green energy infrastructure.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Lack of non-industry monitoring/inspection and public access to all information related to such inspections.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I would like to see much more non-industry monitoring/inspections (for water, air, well operations), increased costs moved to industry vs. taxpayers, stiffer penalties for violations, and easily accessible, transparent and complete access of all inspections, violations and findings to public.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Application Process and Noise.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

Setbacks – The language in Section 17.3.B.3 permits the County to approve setbacks that are less than those required by the COGCC (contrary to the intent of these regulations). This section should be revised to ensure that a reduced setback will not be approved if it would be less than the setback required by the COGCC.

Flow Lines, Transfer Lines, and Gathering Lines – Flow lines may present hazards to the public health and safety. The language in Section 17.3.N.1.d and Section 17.3.T.3 should be modified to require that the coordinates of flow lines be provided upon their installation and activation.

Chemical Handling – Prompt removal of chemicals from the site will provide more protection to the public health and safety. Section 17.3.K.3 should be modified to require the removal of chemicals within 30 days (instead of 60 days).

Application Process – The application submittal requirements identified in Section 17.2.B should include proof that a surface use agreement has been executed with the property owner, or evidence that the applicant has made a good faith effort to negotiate a surface use agreement. This evidence may include a copy of the proposed agreement that was last submitted to the property owner (with confidential information redacted).

Noise – Section 17.3.H.5 should be changed to identify what possible actions may be taken by the County to mitigate low frequency noise impacts.

Q4

Q1

From the list below please select and rank your top five topics that you believe need to be considered and updated as part of this project.

Air Quality	1
Water Quality and Water Bodies	4
Lighting and Visual Impacts	5
Well Plugging and Abandonment	2
Financial Assurance	3

Q2

Respondent skipped this question

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

O&G needs to take all the necessary care in their exploration, removal, and abandonment and bare those costs. There are abandoned mines all over this state -- where a company comes in, takes what they want and leaves as if they have no responsibility for global, US, Colorado, Larimer environmental care. The days of laize faire need to be over.

Q1 Respondent skipped this question

From the list below please select and rank your top five topics that you believe need to be considered and updated as part of this project.

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

The regulations adopted last year – incorporated as Section 17 in the County’s land use code – are woefully inadequate to protect public health, safety, and the environment, and as such, conflict with state law SB-181: in intent and purpose, in specific proposed regulations, and in failure to address many substantial issues necessary to protect public health, safety, and the environment.

The regulations are thoroughly flawed because the policy-making process was deeply flawed by blatant bias toward oil & gas development interests in the Oil & Gas Task Force, undisclosed conflicts of interest in the Task Force, the County's record in steering and managing the policy-making process, and the County's refusal to address many substantive concerns and issues raised by the public during the policy-making process.

The existing regulations need substantial revise throughout, to address and rectify many weaknesses and many more gaps, so the regulations will protect public health, safety, and the environment in accord with the intent of state law as well as recently adopted state rules.

Revision should start with 17.1 Intent and Purpose, to ensure that the Intent and Purpose statement(s) are consistent with state law that provides local governments with authority to regulate oil and gas in a manner consistent with protection of public health, safety, welfare, the environment, and wildlife.

All of Section 17 needs to be reviewed and revised to uphold intent of SB19-181. The County received extensive recommendations during the process of developing the existing regulations (in public record), many of which are highly specific, regarding methods and standards for adequate protection of public health, safety, welfare, environment and wildlife.

Local regulations adopted by other local governments known to be serious about protecting public health, safety, and environment should be considered and serve as a model for Larimer County’s regulations. Regulations adopted by Boulder County, Longmont, and Broomfield should be considered. If Larimer County chooses not to adopt protections for public health, safety, and environment such as other local governments have done, then the County should provide clear explanation about why such protections are not needed or not in the best interest of the County’s residents and environment.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

This survey is a hopelessly inadequate method for public participation in the County's revision of its oil and gas regulations. The survey has major design flaws that bias and limit responses; these flaws render survey results with little or no real value to public policy-making for local regulations that will adequately protect public health, safety, and environment in matters of oil and gas development in Larimer County.

Many topics pertaining to oil and gas development are important and require substantive attention, analysis, and consideration in properly managing and regulating oil and gas development. It is misguided and misinformative to use ranked choice voting as a method for public input.

Why should people be told to choose five topics – and rank them? Should County residents need to choose whether it's worse to be endangered by toxins in the air, or to suffer noise, or lights all night from oil & gas operations? Or whether to worry more about chemical handling or flammable materials? Or whether water pollution, or financial risk from abandoned wells, or living dangerously close to oil & gas operations, are worse than, say, an explosion from a leaking unmapped flow line, or the noise, dust, and danger of heavy truck traffic?

Such choices are unreasonable, this is not about a popularity contest.

What about topics not listed in the survey instrument – such as reverse setbacks; threats to wildlife, to open space and natural areas; and methane leaks, venting, and flaring that cause climate damage. These and other unmentioned topics are also very important and require substantive attention, analysis, and consideration in properly managing and regulating oil and gas development.

The main utility of the survey is to fulfill a checkbox requirement for public participation in the County's revision of its oil and gas regulations. But no one should think that this survey contributes to or achieves useful and effective public input and participation.

With a world-class university located in Larimer County, it would benefit the County to seek advice regarding survey design and effective public participation methods. CSU has respected social science professionals like Dr. Stephanie Malin. Dr. Malin has conducted extensive research locally that would be informative to the County's efforts to communicate effectively with the public regarding concerns, views, issues and priorities related to oil and gas development.

| Flow Lines, Transfer Lines, and Gathering Lines | 4 |
| Financial Assurance | 5 |

Q2

If you selected "Other" in previous question, please indicate what topic(s) you want to include.

I feel more than just the 5 areas need to be addressed and updated. I'd like to see the operators held responsible for the true costs, including fees to cover the administrative costs to county, air, water and road impact fees, bonding to adequately cover costs to plug and abandon a well if operator goes under(state requirements are currently inadequate). I'd also like to see details in our regulations to address transfer of ownership issues when an operator sells.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

setbacks 2,000-2,500ft from homes, schools and high occupancy buildings, parks and recreational areas/paths and open spaces and water bodies. Don't allow in floodplain. Reverse setbacks from existing sites and any flow lines, gathering lines, transfer lines. More frequent leak detection and repair than required by state and 24/7 air quality monitoring, detailed mapping of existing and new flow lines, transfer and gathering lines with regulations addressing permitting of these. Require adequate water quality testing(including radioactivity, voc's, etc) before any discharging or disposal or use of produced water within the county.

Q3

Of the five topics that you noted above, please indicate how you would like to see the regulations updated.

I want these regulations to updated to consider equity and the urgency of climate change. Toxic waste should not be disposed of in low-income neighborhoods or shipped abroad to less wealthy countries with fewer regulations. Relatedly, regulations should make sure that low-income communities are not disproportionately affected by inadequate air quality and water quality. There must be adequate space between housing and any Oil & Gas facilities and any leaks must be reported immediately and accurately; Oil & Gas facilities must be responsible for cleaning up and paying residents for any pollution that occurs due to these leaks. These regulations must be enforceable to keep O&G companies responsible for ethical and safe waste disposal, maintenance of equipment, and any failure of their systems which impact air and water quality.
